**METABOLOMIC**  
DIAGNOSTICS

*Metabolomic Diagnostics is an early stage diagnostics company based in Cork, Ireland that focuses on the prediction of pregnancy complications.*

*PrePsia™, our first product to market, is a simple blood test that identifies a first time mothers' risk of developing preterm preeclampsia which can have devastating consequences later in pregnancy. Identification of women at high risk allows health care providers to administer personalised prenatal care, including preventative drug treatment that can dramatically improve pregnancy outcomes and save the lives of mothers and their babies.*

*The company's vision is to deliver a comprehensive suite of pregnancy risk prediction tests from the same blood sample.*
